Proposed West Bay Wind Project: Update

The proposed West Bay Wind Project will be submitted to Nova Scotia's Green Choice Program Procurement in January 2027. Successful projects are expected to be announced in May 2027. Learn more at www.nova-scotia-gcp.com.

If selected and approved, the project would be built in Cumberland County near West Bay and Kirkhill, outside Parrsboro.

Following an Environmental Assessment and other regulatory approvals, and ongoing Indigenous and community engagement, the project could begin construction in 2028 and be in-service by late 2030.

The project is expected to generate up to 150 megawatts of clean, renewable electricity using up to 26 wind turbines, helping power homes and businesses across Nova Scotia.

Ownership & Engagement

Project planning began with ABO Energy, which recently transferred its interest in the project to Northland Power, a Canadian-headquartered global power producer with nearly four decades of experience developing, building, owning and operating energy infrastructure.

Northland Power looks forward to meeting community members and sharing more about the project at an open house:

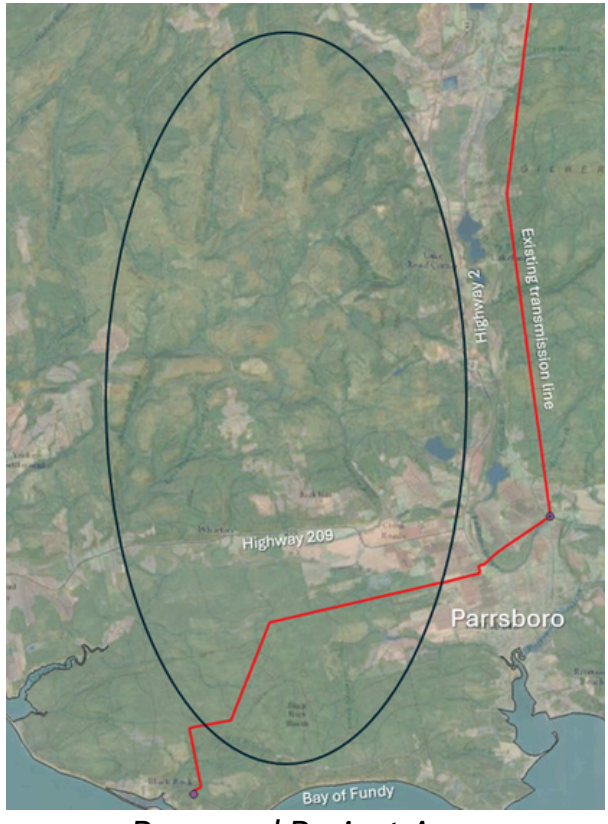

Wednesday, October 21, 2pm - 7pm
Parrsboro Lions Club, 210 King Street, Parrsboro

The Project welcomes your feedback. Consider joining the Community Liaison Committee, filling out the feedback survey below or getting in touch with any questions.
